JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for continuous suspension crystallizer, mixed-suspension, mixed-product removal 172
– for in situ measurement of growth rate
– – by laser diffraction
– – – of cadmium telluride 399
– for melt growth
– – by Bridgman–Stockbarger method
– – – of beta′-phase tin–antimony compound 369
– – – through radioscopic in situ visualization of growth 408
– – by laser heated pedestal
– – – of potassium tantalate niobate 350
– – by ultrasonic Czochralski method
– – – of bismuth–antimony 200
– for miscellaneous purposes
– – containerless processing (CP) 155
– – in situ growth control by laser 1.32 μm 251
– – melt density determination 104
– – Raman of ultrasonic levitated material 155
– for solution growth 194
– – by flux method
– – – top seeded solution (TSSG) 117

Cadmium
– oxide 355
– telluride 297, 399
– zinc telluride 297
Carbon
– nitride 333
Characterization
– by high resolution X-ray diffraction
– – of zinc selenide/gallium arsenide 39
Computer simulation
– of layer thickness and poison ratio 39
Constitutional supercooling
– of potassium tantalate niobate 350
– of tin bismuth 207
Convection 350, 382

Dendritic growth
– of potassium tantalate niobate 350
Device characterization
– double heterostructure 35, 39
– electroluminescent 326
– electronic materials 47, 339, 355
– lasers 1
– optoelectronic materials 292
– quantum wells 1
Diffusonal control
– of lysozyme crystallization 165
Dopants, specials
– oxygen incorporation and precipitation
– – in silicon(boron) 55

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 55

Gallium
– aluminum arsenide 251
– arsenide 256, 264, 274
– selenide 283

Indium
– antimonide 408
– arsenide phosphide 1
– gallium arsenide phosphide 1

Kinetics
– of growth 104, 155, 194, 223, 305
– – by growth interruption 27
– of inclusion genesis 297
– of interface control 13, 83, 408
– of nucleation 147, 215

Lasers, see Device characterization
Lasers, crystals for
– calcium niobium gallium garnet 99
– new laser frequencies 74
– potassium titanyl phosphate 343
– 2-amino-5-nitropyridinium dihydrogen phosphate 361

Melt growth technique
– by Bridgman–Stockbarger method
– – of beta′-phase tin–antimony compound 369
– – of cadmium telluride and cadmium zinc telluride 297
– – of germanium 83
– – of indium antimonide 408
– – of lead tin telluride 83

– – theory of directional solidification 403
– – theory of twins 239
– by Czochralski method
– – of bismuth antimony 200
– – of calcium niobium gallium garnet (CNGG) 99
– – of silicon 313
– – of silicon(boron) 55
– – of strontium lanthanum aluminate 123
– – theory of nonlinear dynamic process 390
– – theory of steady state flow 382
– – theory of twins 239
– by sublimation
– – of silicon carbide 339
– by uniaxial solidification
– – of lead tin telluride 91
– – theory of 207
Microgravity, growth under
– of cadmium zinc telluride 297
– of lead tin telluride 91
Morphological stability 207
– of cadmium zinc telluride 297
– of interfaces 297
– of zinc selenide 292

Nucleation
– of chemical vapor deposited diamond 77
– of hydroxyapatite 147
– of lithium disilicate glass 215
– of lysozyme 165
– of twins of III–V compounds 239
Numbers
– Biot 390
– Hartmann 313
– Peclet 313

Optoelectronic materials, see Device characterization

Phase diagram
– of gallium selenide 283
– of $KTaO_3$–$KNbO_3$ 350
Potassium
– tantalate niobate 350
– titanyl phosphate 343
Precursor
– for diamond growth (ethanol) 77
– for hydroxyapatite (amorphous calcium phosphate) 147
– for indium arsenide, by monoethyl arsine 19
– for silicon carbide (methyl silane) 111
– for zinc selenide 47

Quantum wells, see Device characterization

Silicon 305, 313
– as substrate
– – for gallium arsenide 13, 264, 274
– – for gallium selenide 283
– – for silicon germanium 320
– carbide 339
– germanium 320
Solid growth technique
– by strain anneal
– – of gallium arsenide on silicon 13
Solution growth technique
– by cooling, constant supersaturation
– – of potassium aluminum sulphate 172
– by flux method
– – of beta-barium borate 117
– – of potassium tantalate niobate 350
– – of potassium titanyl phosphate 343
– by low temperature method
– – of n-methylurea 74
– – of potassium alum crystals 194
– by sol gel method
– – of 2-amino-5-nitropyridinium dihydrogen phosphate 361
– theory of mean growth rates of a crystal collective 181
Stefan problem or moving boundary problem 223
Superlattices, multilayers
– of III–V compounds 8, 39
– of II–IV–V compounds 35
– of II–VI compounds 39
Surface energy, determination
– of molten $KNbO_3$ 104
Surface structure
– of compound semiconductor 64
– of $KAl(SO_4)_2 \cdot 12H_2O$ 194

Thin film growth, epitaxy
– by atomic layer epitaxy
– – theory of 64
– by chemical beam epitaxy
– – of indium arsenide/indium phosphide 27
– by magnetron sputtering
– – of indium arsenide/indium gallium arsenide 1
– by molecular beam epitaxy 13, 39, 234
– – of gallium arsenide 13, 264, 274
– – of gallium selenide 283
– – of indium arsenide 234
– – of silicon germanium 320
– – of zinc selenide on gallium arsenide 39
– – theory of 64
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of silicon 305
– – – of silicon carbide 111
– – through evaporation and condensation
– – – of SrS–SrS:Ce–SrS 326
– – through metalorganic chemical vapor deposition 8, 35, 47, 130
– – – of gallium arsenide 251, 256
– – – of indium arsenide 19
– – – of indium gallium arsenide 8
– – – of indium phosphide 8

– – – of $ZnGeP_2$/GaP 35
– – – of ZrO_2 and Y_2O_3 130
– – through reactive ionized cluster beam
– – – of carbon nitride 333
– – through spray pyrolysis
– – – of cadmium oxide 355

Vapor growth technique
– by physical vapor transport
– – of zinc selenide 292

Zinc
– cadmium telluride 297
– selenide 292
